

Abstract

It is a primary object of this invention to improve the ergonomic properties of crown caps provided with strips detachable with the aid of tag thereof, more specifically to increase the usability and safety of the caps, and to reduce the possibility of self-uncorking of said easy-open closures and the interengagement therebetween during transportation and storage of corked bottles. Several embodiments of said crown caps, i.e. the caps provided with a combined tag, an incorporated tag and a bent tag-strip are also enclosed.
